

Avalanche® FORK LIFT BOX PLOW

Key Features:

Fixed Wear Shoes
Fixed wear shoes are standard on all rubber edge models. All Avalanche® wear shoes are made with AR 400 steel.

SIDE PANEL BRACE:
Avalanche® PTA & PTAT models are equipped with one square tube side brace. The engineered braces prevent the 24" high side panels from buckling under plowing stress or impact. They are positioned to withstand the maximum amount of impact.

FIXED RUBBER EDGE:
Plows are equipped with a fixed rubber cutting edge. Using a top-of-the-line 85-durometer rubber compound in the cutting edge gives it a long service life. The cutting edge is reversible and adjustable. Choose Avalanche® rubber edge models for that squeegee-like cleaning of loose, wet or lighter snow. Rubber edge models are also ideal for sensitive surfaces such as interlocking pavers & airport runways.
